

What is Claimed is:

1. An auxiliary bracing structure for a movable rack, comprising:

a case;

5 a lid corresponding to the case and being coupled with the case to form a substantially closed housing compartment, and having a bracing strut mounted on an inner side thereof; and

a movable rack located in the housing compartment having a slot corresponding to the bracing strut, the slot having a loading end which has a diameter greater than the diameter of an anchor end of the slot, the strut being insertable into the slot
10 through the loading end and movable to the anchor end for anchoring thereby to anchor the movable rack on the lid.

2. The auxiliary bracing structure of claim 1, wherein the bracing strut is riveted to the lid.
3. The auxiliary bracing structure of claim 1, wherein the bracing strut has an anchor
15 groove corresponding to the anchor end.
4. The auxiliary bracing structure of claim 1, wherein the loading end has an assisted coupling member.
